

# Use Manufacturing Facility as Trigger Condition

Last Modified on 05/22/2023 2:08 pm MDT

In version 8.7.1, a new setting exists in the Triggers window, Use Manufacturing Facility as Trigger Condition. This feature benefits multi-facility customers who automatically recost jobs when sent to production. For example, assume a multi-facility customer has two cost categories at each facility, "Estimate" and "Actual." The Estimate cost category is used to create a competitive quote when bidding on projects. Then, when the job is sent to production, the actual cost category is used. This cost category contains the actual lumber costs for the current period. This flow allows customers to track the price of their jobs more accurately. With version 8.7.1, the system looks at the manufacturing facility's actual cost category when the recost is performed.
